

# ILLINOIS DEPARTMENT OF PUBLIC HEALTH

## Data Reporting System

<http://app.idph.state.il.us/emsrpt>

The *Data Reporting System* is an internet-based query system that is accessible online through the Illinois Department of Public Health (IDPH) website. This interactive data system supports querying of five statewide databases and provides traffic crash, injury and health related descriptive information at the state, EMS regional and county level. Limited data elements from the following databases can be accessed through this system:

- IDPH Mortality Data (1994-2002)
- IDPH Prehospital Run Report Database (1996-2001)
- IDPH Trauma Registry Database (1994-2003)
- Illinois Dept of Transportation (IDOT) Traffic Crash Report (1994-2003)
- Illinois Hospital Association (IHHA) Hospital Discharge Database (1994-2004)

Utilization of this system can support local and statewide injury, illness and hospitalization trending and lend to surveillance and quality improvement efforts. The following URL provides direct access to the system.
